Partial Fraction Decomposition

1. The fractions numerator needs to be of a lower polynomial degree than the denominator
2. Guess one of the Zeros with the values:
(-3, -2, -1, 1, 2, 3)
which will t
3.

Horners Method

begin by guessing one of the zero points with the values: (-3, -2, -1, 1, 2, 3)

$f(x) = 5x^3 - 8x^2 - 27x + 18 \rightarrow x = -2$

5	-8	-27	18	
	$5 \cdot (-2) = -10$	$-18 \cdot (-2) = 36$	$9 \cdot (-2) = -18$	
5	$-8 + (-10) = -18$	$-27 + 36 = 9$	$18 + (-18) = 0$
